

# IKO CP primer black

## Description:

---

Synthetic adherence primer.

## Use:

---

IKO CP primer BLACK has been developed in order to create an excellent adherence of numerous bituminous products on concrete or asphalt surfaces. Even with regular presence of water and dissolved salts, the adherence is excellent for a long period. As a premium adherence primer with moist repulsive properties, IKO CP primer BLACK is recommended for a large range of uses.

## Characteristics:

---

- Can be applied cold.
- Excellent adherence to concrete and asphalt before the application of bituminous products
- Binds loose particles to the surface.
- Can be applied on wet surfaces thanks to its water repulsive action.
- Ready to use.
- Easy to apply with brush or airless pistol
- Excellent adherence, even on wet surfaces.
- Transparent, lightly colored

## Characteristics:

---

- Color: Black
- IKO CP primer BLACK is a mixture of resins and special additives, dissolved in hydrocarbon solvents.

## Implementation:

---

### 1. Preparation of the surface

- The surface must be free of humidity, oils and fats and free of dust
- AIKO CP primer BLACK can be applied by means of brush or airless pistol. Take care not to breathe in spray or gasses.
- Take care that the primer does not thicken, due to long exposure of open tin by hot weather. If applied anyway, the layer may be too thick, influencing negatively adherence.

### 2. Application of IKO CP primer BLACK

- Consumption equals 0,1 à 0,2 gr/m<sup>2</sup>
- Recommended drying time is minimum 15 minutes, on wet surfaces minimum 90 minutes.
- After applying AIKO CP primer BLACK, install the bituminous coating or expansion joint mass within some hours, but surely the same day. In some cases, it can be useful to do an adherence test.
- Unopened, can be kept for at least 1 year by normal conditions

## Sizing and palletization:

---
